

DATAFLOW SPREADSHEET LIVE

ENHANCED REPORTING. DEEPER INSIGHT.

DATAFLOW SPREADSHEET LIVE

Dataflow Spreadsheet Live provides deep financial reporting and insights that enable you to make better, faster business decisions, maximise ROI across the business and respond to business challenges quicker and more confidently.

By linking your Dataflow Accounts database directly with Microsoft Excel, Spreadsheet Live provides a real-time dynamic feed of financial and operational data that can be analysed and explored using Excel's powerful spreadsheet functions (charting, text formatting and sorting). Not only does that mean you can bring greater accuracy and elegance to your regular reports, it gives you the power to see what's happening across your business right now.

Access your data anywhere with Spreadsheet Live

SPREADSHEET LIVE ENABLES YOU TO:

- **Spend less time creating reports** and more time analysing what they tell you
- **Gain deeper insights** by drilling down from top-level reporting to account details, including journal entry information and associated scanned documents
- **Create attractive, easy to edit reports** for regular or custom reporting requirements, all delivered in Word, PDF or HTML formats
- **Extend standard Excel capabilities** with purpose built custom reporting functions
- **Access from anywhere** via a secure connection to your Dataflow Accounts data enables your users' Excel to sync from remote locations via your VPN
- **Leverage your team's existing Excel skills** to create reports with more ease and greater functionality

ELIMINATE THE TERROR OF HUMAN ERROR

Despite all the advances in financial software, human error is still the biggest cause of inaccuracy in accounting and financial reporting. It's time that changed.

Eliminating the need for copy-pasting of information from one tool to the other, Spreadsheet Live dramatically reduces error while streamlining the data gathering process, enabling you to have greater confidence in your reports.

WHY PAY FOR CUSTOM REPORTS?

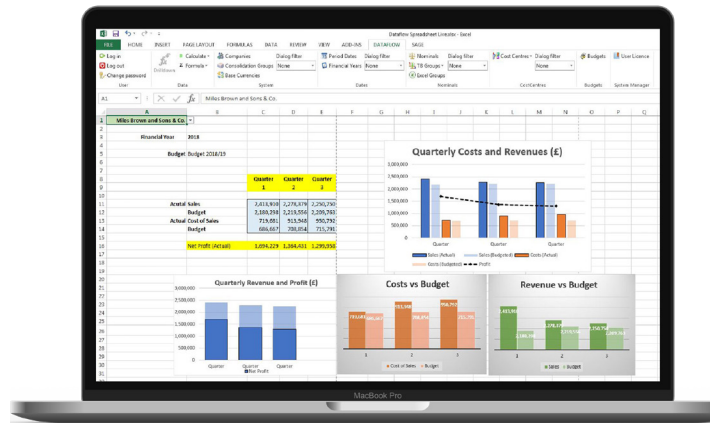

Your business is growing and your reporting requirements will inevitably evolve over time. With lesser financial software, a lack of flexibility means you're unable to change your reports as you want and additional costs are incurred as new templates are created.

With Spreadsheet Live, this is no longer an issue. It gives you complete control of the information you wish to report on and how you present it, whether for ad-hoc analysis or a scheduled regular reporting requirement.

WEB ACCESS FREES YOUR USERS

Using Spreadsheet Live you can build reports in Excel that can securely access your Dataflow Accounts data from anywhere. Spreadsheet Live can be configured to connect to your data using HTTPS - the industry standard for secure web access - giving you peace of mind that your data remains secure even when operating remotely.

All processing of Dataflow Accounts data takes place on your server - only the results are returned to Excel - so your reports will still calculate speedily even when you are on the other side of the globe.

Analyse actual vs budgeted costs and revenues in real-time for instant understanding of business performance

SECURITY

Spreadsheet Live incorporates all the same built-in security found in Dataflow Accounts. This includes password controls with rules for strong passwords, password expiry, history and maximum attempts, and a "forgotten password" function.

Company and ledger account level security as found in Dataflow Accounts has also been fully implemented in Spreadsheet Live.
